Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

1) Responsive to communication(s) filed on 26 June 2008.  2a) This action is FINAL.  2b) This action is non-final.  3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.  Disposition of Claims  4) Claim(s) 18-20.24 and 25 is/are pending in the application.  4a) Of the above claim(s) is/are withdrawn from consideration.  5) Claim(s) is/are allowed.  6) Claim(s) 18-20.24 AND 25 is/are rejected.  7) Claim(s) is/are objected to.  8) Claim(s) are subject to restriction and/or election requirement.  Application Papers  9) The specification is objected to by the Examiner.  10) The drawing(s) filed on is/are: a) accepted or b) objected to by the Examiner.  Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).  11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.		Application No.	Applicant(s)				
The MAILING DATE of this communication appears on the cover sheet with the correspondence address   Period for Reply	Office Action Comments	10/075,149	ALEKSIC ET AL.				
The MAILING DATE of this communication appears on the cover sheet with the correspondence address → Period for Reply  A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  Fathers in time maps be available under the provisione of 3 CFR 1136(b), is no event, fivener, map a reply be timely filed.  If NO period for reply is apscrided above, the maximum situation, period will apply an ewit expires SEX (6) MONTHS from the matting date of this communication.  Father to reply which the set or carbridge proof or reply will by status, carbon and apply and supply and sope SEX (6) MONTHS from the matting date of this communication.  Father to reply which the set or setting date of this communication, seen if timely filed. This reply filed is a specified above, the maximum situation provided by the maximum situation of the maximum situation.  Father to reply which the set or setting the maximum situation is non-final.  3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.  Disposition of Claims  4) Claim(s) 18-20.24 and 25 is/are pending in the application.  4a) Of the above claim(s) is/are allowed.  6) Claim(s) is/are allowed.  6) Claim(s) is/are allowed.  6) Claim(s) is/are allowed.  7) Claim(s) is/are objected to.  8) Claim(s) are subject to restriction and/or election requirement.  Application Papers  9) The specification is objected to by the Examiner.  10) The drawing(s) filed on is/are: a) accepted or b) objected to by the Examiner.  Application Papers  9) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  a) All b) Some * c) Mone of:  1 Certified copies of the priority documents have been received.  2 Certified copies of the priority documents have been received in Application No	Oπice Action Summary	Examiner	Art Unit				
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extractions of time may be available under the provisions of 37 CFR 1.36(a). Intro event, however, may a may be timely filled.  - If No provide regily is specified above, the maximum stablety point of warply and will stopps fix (\$0) MONTH STORE the transition of the communication. Parameters of the Communication of the communication, even if litted by filled in the stable parameters of the Communication, even if litted by filled, may reduce any stable parameters of the Communication, even if litted by filled, may reduce any stable parameters of the Communication, even if litted by filled, may reduce any stable parameters of the Communication, even if litted by filled, may reduce any stable parameters of the Communication, even if litted by filled, may reduce any stable parameters of the Communication, even if litted by filled, may reduce any stable parameters of the Communication, even if litted by filled, may reduce any stable parameters of the Communication, even if litted by filled, may reduce any stable parameters of the Communication, even if litted by filled, may reduce any stable parameters of the Communication, even if litted by filled, may reduce any stable parameters of the Communication, even if litted by filled, may reduce any stable parameters of the Communication, even if litted by filled, may reduce any stable parameters of the Communication, even if litted by filled, may reduce any stable parameters of the Communication, even if litted by filled, may reduce any stable parameters of the Communication and the Communication is considered to the communication, even if litted by filled, even of filled by filled and the Communication and the Communicat		Khanh Dang	2111

#### **DETAILED ACTION**

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

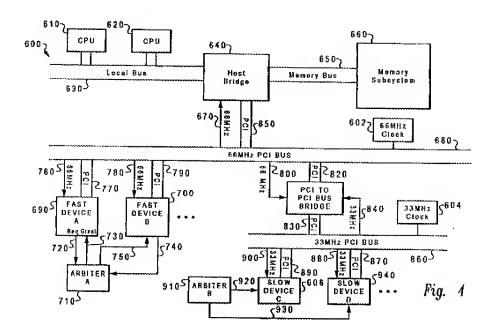

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 18-20, 24, and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over lachetta Jr. (lachetta, 5,727,171) in view of Porterfield and Ajanovic et al. (Ajanovic), and Heil et al. (Heil).

lachetta discloses a data processing system as shown below in Fig. 4:

Art Unit: 2111

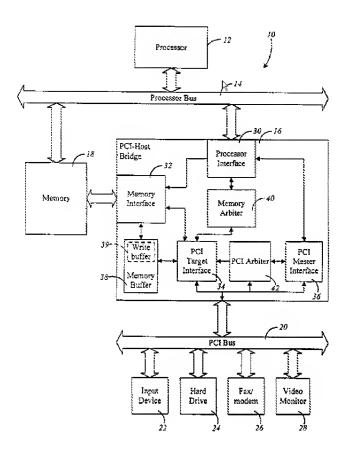

# comprising:

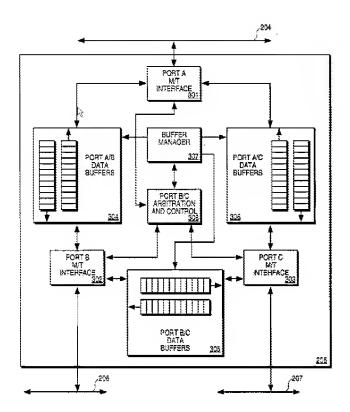

a system controller or host bridge 640 connected to memory 660 via a memory bus 650, a high speed arbiter 710 for providing arbitration to high speed devices A and B, an I/O controller or PCI/PCI bus bridge 810 coupled to a high speed bus 680, a low speed arbiter 910 for providing arbitration to low speed devices C and D; the PCI/PCI bridge 810, the fast devices A and B are all connected to high speed bus 680.

Izchetta does not disclose that the high speed arbiter may be included in the system controller or host bridge 640; and the low speed arbiter may be included in the I/O controller or PCI/PCI bridge 810.

However, the inclusion of an arbiter into the host bridge is old and well-known as evidenced by at least Porterfield. Porterfield disclose the use of an integrated arbiter 42 in a host bridge 16 as shown below:

Further, the inclusion of an arbiter into a PCI bridge 205 is also well-known as evidenced from Ajanovic. Ajanovic discloses an arbiter included in a PCI bridge 203:

Since all references are both from the same field of endeavor, the purpose disclosed by Porterfield and Ajanovic would have been recognized in the pertinent art of lachetta.

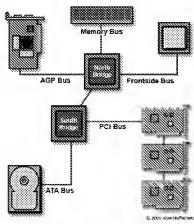

Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to integrate the high speed arbiter and low speed arbiter into the I/O controller or PCI bridge and system controller or host bridge, respectively, as taught by Porterfield and Ajanovic, for the purpose of reducing the number of discrete components, and thus, reducing cost; and also facilitating system integration. It is important to note that since the PCI bridge, the high speed devices A and B are all connected to the 66 Mhz high speed bus, it is clear only one device can access to the 66 Mhz bus at a time, and the high speed arbiter will provide arbitration to the PCI

Art Unit: 2111

bridge, the high speed device A and the high speed device B for accessing the 66 Mhz high speed bus.

Page 6

The further difference between the claim subject matter and lachetta is the use of dual channel memory controller. However, the use of dual channel memory controller, first developed by Intel, is old and well-known, as evidenced by at least Heil. Heil discloses a multiple-port structure. Heil discloses two separate memory channel controllers (figure 8, structures 134, 136, 142, and 144). Heil teaches that the general access latency caused by the severe bandwidth constraint can be improved with the dual memory channels (column 1, lines 52-56). Thus, it would have been obvious to one having ordinary skill in the computer art at the time Applicant made the invention to adapt Heil's teachings into lachetta for the purpose of improving the general access latency by the dual memory channels. Note also that it is inherent that a computer system, such as the system disclosed by lachetta must include a hard drive, and the hard drive is connected to the PCI bridge or PCI south bridge. See diagram below from How Motherboards Work, cited below. Note also that ATA Bus is operated as a higher speed than the low PCI Bus (33 Mhz).

Busses connect different parts of the motherboard to one another

Note also that the memory bus 650 is not coupled to the low speed bus arbiter 910 and coupled to the storage device 660.

With regard to claim 24, see discussion above.

Claim 25 is rejected under 35 U.S.C. 103(a) as being unpatentable over lachetta Jr. (lachetta, 5,727,171) in view of Porterfield and Ajanovic et al. (Ajanovic), and Heil et al. (Heil) as applied to claims 18-20 above, and further in view of the following.

The further difference between the claim subject matter and that of lachetta is the use of the integrated graphics engine into the host bridge or north bridge. However, the use of integrated graphics in the north bridge is old and well-known as evidence by the definition of north bridge by Wikipedia cited below.

Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to integrate the graphics engine into the north or host bridge of lachetta, since the use of integrated graphics in the north bridge is old and well-known

as evidence by the definition of north bridge by Wikipedia cited below, for the purpose of reducing the number of discrete components, and thus, reducing cost; and also facilitating system integration.

### Response to Arguments

Applicants' arguments filed 11/13/2007 have been fully considered but they are not persuasive.

At the outset, Applicants are reminded that claims subject to examination will be given their broadest reasonable interpretation consistent with the specification. *In re Morris, 127 F.3d 1048, 1054-55 (Fed. Cir. 1997)*. As a matter of fact, the "examiner has the duty of police claim language by giving it the broadest reasonable interpretation." *Springs Window Fashions LP v. Novo Industries, L.P.,* 65 USPQ2d 1862, 1830, (Fed. Cir. 2003). Applicants are also reminded that claimed subject matter not the specification, is the measure of the invention. Disclosure contained in the specification cannot be read into the claims for the purpose of avoiding the prior art. *In re Sporck*, 55 CCPA 743, 386 F.2d, 155 USPQ 687 (1986).

With this in mind, the discussion will focus on how the terms and relationships thereof in the claims are met by the references. Response to any limitations that are not in the claims or any arguments that are irrelevant and/or do not relate to any specific claim language will not be warranted.

## The 112 Rejection:

Applicants' amendment to claim 18 overcomes the 112 Rejection.

### The 103 Rejection:

Applicants argue that "the Office Action on page 7 states that 'the memory bus 650, which is shown in lachetta Fig. 4, and is only coupled to the host bridge 640 and the memory subsystem 660, 'is not coupled to the low speed bus arbiter 910 and coupled to the storage device 660' in an attempt (apparently) to read on the claim language referencing the claimed I/O controller and the separate bus connection. However the claim indicates that the claimed I/O controller is in communication not only with the high speed bus arbiter via a high speed bus, but is also in communication with a separate bus (for example bus 133 to hard drive 150 as shown in Applicants' FIG. 1) that is not coupled to the low speed bus arbiter and [is] coupled to a data storage device. Iachetta shows distinctly different structure, and the memory bus 650 apparently alleged to correspond to the claimed "separate bus" is in fact not coupled to the PCI to PCI Bus Bridge 810 of lachetta, as it would need to be coupled based on the corresponding structure identified by the USPTO to correspond to the claimed I/O controller. Since the claimed structure is patentably distinguishable from the structure disclosed by lachetta, this reference does not teach what is alleged and Applicants respectfully submit that the claim is in condition for allowance."

In response to Appellants' argument, at the outset, as discussed previously, it is clear that when the high speed arbiter is incorporated into the Host Bridge, the high

speed arbiter would become a high speed PCI bus arbiter. Thus, it is clear that the PCI/PCI bridge, connected to the Host Bridge (as in Fig. 4), is also connected to the PCI arbiter, which must be in full compliance with the PCI specification. Note also that the PCI arbiter is included inside the Host Bridge.

In any event, as disclosed by lachetta, column 8, lines 28-51, reproduced below:

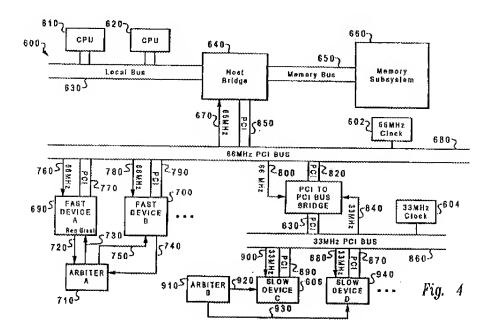

PCI to PCI bus bridge \$10 is able to accomplish this task because it is connected to the same resources as both PCI bus 860 and PCI bus 680. PCI to PCI bus bridge \$10 is connected to PCI bus 680 by PCI connection 820. This connection contains the same data, address and control lines as does PCI connection 790 and PCI connection 770 which attach Fast Device B 700 and Fast Device A 690 to PCI bus 680. Also, PCI to PCI bus bridge \$10 is connected to 66 MHz clock input \$00 originates at the same source, 66 MHz clock source 602, as does the clock source for Fast Device A 690 and Fast Device B 700.

In a similar manner, PCI to PCI bus bridge \$19 is connected to PCI bus 869. PCI to PCI bus bridge \$16 has a PCI connection \$36 and a 33 MHz clock input \$40. As it sees the same clock inputs and has the same connections to both PCI buses, PCI to PCI bus bridge \$19 is able to read and write to both PCI bus 689 and PCI bus 860. The internal circuity of PCI to PCI bus Bridge \$10 is then able to transmit data to end from both PCI buses even though both PCI buses run at different clock rates. This presents the advantage of allowing Fast Device A 690 and Fast Device B 700 to run at a faster clock rate than the Slow Device C 606 and Slow Device D 940. These devices are allowed to run at a slower clock rate.

It is clear that the PCI connection 820 connecting the PCI/PCI bridge to the Host Bridge 640 via high speed PCI bus 680 and a single PCI connection 850, the PCI connections 770 and 790 connecting the high speed devices 690 and 700 to the Host Bridge via high speed PCI bus 680 and a single PCI connection 850, all contain the same data, address and control lines. The PCI connection 850 also contains data, address, and control lines used by the Host Bridge 640 to communicate with devices

Art Unit: 2111

attached to the high speed bus 680. See column 7, lines 40-45. Fig. 4 is reproduced below:

Thus, it is clear that the high speed arbiter A, when incorporated into the Host Bridge 640, would become a PCI high speed bus arbiter for providing arbitration between all high speed devices including the PCI/PCI bridge 810 connected to the high speed PCI bus 680. In other words, the PCI high speed arbiter, which must be in full compliance with the PCI specification, is "coupled" to the PCI/PCI bridge 810 connected to the high speed PCI bus 680. Note that not only Porterfield teaches placing the arbiter into the Host Bridge, lachetta, in the embodiment of Fig. 3, teaches that the high speed arbiter and the Host Bridge can be implemented in the same physical device. See Fig. 3, column 6, lines 33-37. Further, it is also clear that the memory bus 650 is not coupled to the low speed bus arbiter 910 and coupled to the storage device 660.

Application/Control Number: 10/075,149 Page 12

Art Unit: 2111

Contrary to Appellants' argument, claim 18 does not require that the separate bus is "coupled" to the I/O controller or PCI bridge. Claim 18 only requires that the I/O controller is in communication with the "separate bus." Claim 18 is reproduced below for ease of reference and convenience.

- 18. (previously presented) A data processing system comprising:
  - a system controller having:
    - a first memory channel controller;
    - a second memory channel controller; and
    - a high-speed bus arbiter,

an input output (IO) controller in communication with the high-speed bus arbiter via a high speed bus, and having a low-speed bus arbiter coupled to a low speed bus, wherein the low-speed bus arbiter supports a slower bus rate than the high-speed bus arbiter, and a separate bus that is not coupled to the low speed bus arbiter and coupled to a data storage device.

It is clear that at least in case of DMA operation from the PCI bridge, the PCI bride is in communication with the memory via the memory bus. See definition of Direct Memory Access (DMA), under "PCI" provided by Wikipedia.

With regard to claim 25, Applicants argue that "this claim is a dependent claim which includes all the features of independent claim 24 and is therefore allowable for the reasons provided above. Further, claim 25 requires a dual bus based unified memory architecture wherein a unified memory is controlled to store both graphics data and system data. Applicants respectfully note that Heil, which was cited in the Office

Action as disclosing "two separate memory channel controllers," does not discloser a unified memory as required by claim 25. See Office Action, page 6. Heil specifically discloses two separate memory elements, as in Heil FIG. 8 "code/data storage 138" and "frame buffer 140." There is no "unified memory" disclosed in Heil and therefore claim 25 is also allowable for this feature."

Contrary to Applicants' argument, as already pointed out the previous Office Action, the use of integrated graphics in the host bridge/north bridge is old and well-known as evidence by the definition of north bridge by Wikipedia. Regarding the use of dual channel memory, as already discussed in the previous Office Action, the use of dual channel memory controller, first developed by Intel, is old and well-known. In case of integrated graphics (graphics controller provided with the Host Bridge/North bridge, and also known as on-board graphics), since the Host Bridge/North bridge is connected to the memory (with dual channel) via a memory bus, it is clear that the memory stores both "graphics data and system data."

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

#### **Contact Information**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Khanh Dang whose telephone number is 571-272-3626. The examiner can normally be reached on Monday-Friday from 9:AM to 5:PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Rinehart, can be reached on 571-272-3632. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
